Attention Mr. Ed Routhier, Plant Engineer

Gentlemen:

RE: INDUSTRIAL WASTES

Thank you for your letter of April 27 and the information it contained.

We also need to know what metals may be in solution in your industrial wastes. This was also requested in our April 10 letter.

Be advised that Acetone and Trichlorethylene are specifically prohibited and must be removed from your wastes upstream of the neutralizing tanks.

Enclosed for your guidance in evaluating wastes acceptable in the City's sanitary system is another copy of Ordinance No. 175.638.

As you are already aware, we are inclined to be reasonable in our approach to enforcement of regulations when circumstances indicate that efforts are being made to correct unsatisfactory conditions.

We hope that you will continue to exercise close surveillance over your present neutralizing operation while awaiting delivery of the new equipment.

Very truly yours,

GEORGE L. MCPHEETERS
Water Division Engineer
